Oxalis Advanced Estimation

Oxalis Advanced Estimation is a web-based estimation software to help professional teams estimate at scale, improve speed to bid, and win complex awards with error-free estimates.
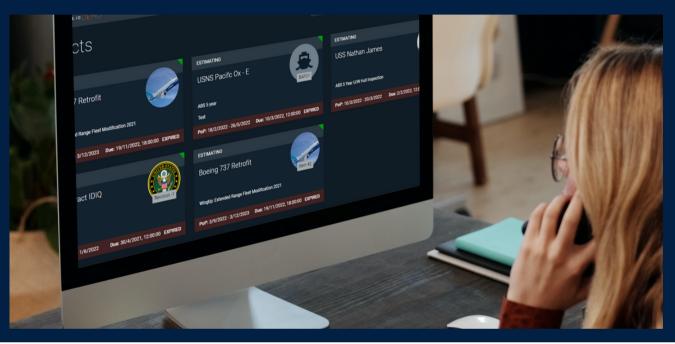

✓ ESTIMATE FASTER

✓ HIGHER ACCURACY

✓ WIN LARGE CONTRACTS

Win Large Contracts.
with Oxalis Advanced Estimation.

The lack of a fully featured and advanced estimation capability can paralyze, hamper, or decrease your business growth. Our Advanced Estimation turns estimation into a strength by creating faster, more accurate, more complex, and more secure bids.

A dedicated estimation solution is packed with features such as real-time collaboration and data updates; built-in complex math calculators with full parametric support; copy work items, schedules, labor breakdowns, steps, etc.; document management; and more.

ESCAPE EXCEL

When it comes to estimation, Excel is insufficient. With limited collaborative functionality, your team is constantly at risk that errors will go undetected.

COLLABORATE

Our multi-user interface allows your employees and external contractors to work alongside each other featuring live updates.

SECURE ACCESS

Ensure data protection with a full audit trail of project changes.

INCREASE ACCURACY

Work smarter, not harder. Propel new projects to success using historic data. Increase the accuracy of estimates while understanding realistic resource allocation.

Features Breakdown

ONE LIVE PLATFORM

Watch your estimate build in real time. Oxalis Advanced Estimation is a zero-click refresh platform meaning you can watch your estimate change live on-screen real-time as it comes together. Use this capability to understand progress, margin changes, and activity to get to bid faster. Keyboard shortcuts accelerate data entry rivaling one-line spreadsheet performance. It's a pleasure to use.

IMPORT, EXPORT, AND COMPARE

Need to start from a price sheet or a prior estimate? Oxalis Advanced Estimation can easily import previous files to help kickstart new projects. Specific users can also compare previous rate cards or create new configurations.

COMPARE MARGINS

Compare margins with multiple rate cards per effort, a default structure for analysis, and customizable configurations of pricing per effort, per material, or labor role. Estimating management can flex these levers to produce the optimal margin for large contracts.

Oxalis Advanced Estimation has helped save +10,000 hours per year in operations and on-time delivery across the board for Shipyards across the United States.

COPY ESTIMATES, WORKS ITEMS, OR LINES

The power of Oxalis Advanced Estimation is its ability to leverage estimates you may have done in the past. Copy work items, schedules, labor breakdowns, steps, and more. Utilizing the Oxalis Estimation features for data reuse and best practice purposes will enhance your team's accuracy and project margin.

FULL FEATURE FILE MANAGEMENT

Any estimate will tell you they need the spec, the request, or the diagram to estimate effectively. Associate files securely to your project or work items. Stay organized and accurate with Oxalis Advanced Estimation's file organization capability.

ASSIGN OWNERS AND REVIEWERS

Prioritize important work items by explicitly assigning specific owners or reviewers for each item or group. This explicit assignment not only helps to manage teams but also prioritizes detailed communication and interaction between users. Live updates help you keep track of progress while ensuring the accuracy of data before errors can spiral out of control.
